PROFESSIONAL SUMMARY

Informatics graduate from Telkom University (GPA 3.21/4.00) with internship experience in log and observability data at PT Telkom Indonesia. Used Elasticsearch, Logstash, and Kibana to structure operational logs and build dashboards for monitoring and audit automation workflows. Also developed Python-based analysis projects, including pose estimation evaluated against manual ground truth. Interested in data analyst, business intelligence, and operational analytics roles where reliable data can support clear decisions.

EDUCATION

Bachelor of Informatics | Telkom University | *2022 - 2026*

GPA: 3.21/4.00 | *Bandung, Indonesia*

Thesis: Comparison of MediaPipe BlazePose and YOLOv8-Pose for video-based bicep curl movement analysis.

EXPERIENCE

Data Analyst Intern | PT Telkom Indonesia, DIT-INE | *Jul 2025 - Aug 2025*

Jakarta Timur, Indonesia

- Parsed unstructured ITGC and Kubernetes logs using the ELK Stack (Elasticsearch, Logstash, Kibana), transforming operational records into structured data for monitoring and audit automation workflows.
- Built Kibana dashboards to make operational information easier to review and monitor, and prepared log outputs for downstream audit automation.
- Worked with operational data where accuracy and consistent structuring were important; collaborated with the team to support monitoring needs.

SELECTED PROJECTS

Undergraduate Thesis | Pose Estimation for Movement Analysis | *2025 - 2026*

- Compared MediaPipe BlazePose and YOLOv8-Pose against manually labeled ImageJ ground truth using MAE and RMSE to evaluate pose-estimation accuracy.
- Built a Python and Pandas analysis pipeline for elbow angles, repetition counting, range of motion, and angular velocity under time-varying tension; BlazePose achieved 100% repetition-count accuracy (8/8) in the evaluated sample.

JalanYuk | Bali Trip Planning and Route Optimization Project | *2026*

- Built a trip-planning experience that combines a curated Bali destination catalog with place search, preserving source identity and distinguishing catalog locations from search results.
- Implemented route planning across supported travel modes and added manual place pins, so users can shape itineraries and choose routes based on their needs.
- Improved place search with local catalog fallback and location-aware ranking; added encrypted backup and restore workflows for trip data.

FitTrack | Strength Training Analytics Web App | *2026*

- Developed an offline-first React and Vite application for workout logging, reusable routines, schedules, workout history, and reviewed Quick Import.
- Created weekly muscle-volume summaries, exercise progress charts, and estimated one-repetition-maximum trends; included optional manual Supabase backup and Vercel deployment.

Cripto | Responsive E-commerce Web Project | *2025*

- Designed and built a responsive e-commerce website with HTML, CSS, and JavaScript, including a WhatsApp-based purchase flow.

TECHNICAL SKILLS

Data analysis: Python, Pandas, Jupyter, basic SQL, Microsoft Excel (basic formulas, charts, dashboards)

Data visualization and monitoring: Kibana, dashboard development, operational monitoring

Data engineering tools: Elasticsearch, Logstash, ELK Stack

Methods: Data cleaning, model evaluation, MAE/RMSE analysis, data interpretation

Development: React, Vite, HTML, CSS, JavaScript, Supabase

Tools: Visual Studio Code, Git, GitHub, Google Colab

TRAINING

AWS AI Practitioner Program | Yayasan Indonesia Emas Merdeka | *Aug 2026 - Nov 2026*

Studying foundational artificial intelligence concepts and their use in AWS services through a structured practitioner training program. This training supports my interest in applying AI tools responsibly to practical technology and data workflows.

Menerapkan Rekayasa Prompt dengan Azure OpenAI Service | Digital Talent Scholarship, Digitalent Komdigi | *May 2026 - Sep 2027*

Learned the principles of writing and refining prompts for Azure OpenAI Service, with attention to how instructions and context influence generated responses. The training broadened my understanding of using generative AI to support digital tasks.

Introduction to Cloud Computing | Digital Talent Scholarship, Digitalent Komdigi | *May 2026 - Sep 2027*

Studied introductory cloud computing concepts and the role of cloud services in delivering digital applications. The course provided a foundation for understanding how cloud resources support scalable technology solutions.
