PROFESSIONAL SUMMARY

Informatics graduate with experience transforming operational logs into structured data and Kibana dashboards at Telkom Indonesia. Applied Python and Pandas to model evaluation and automated movement analysis, and developed FitTrack with progress charts and strength-training analytics. Interested in operational analytics, digital product monitoring, and clear data visualization.

EDUCATION

Telkom University | Bachelor of Informatics | GPA 3.21/4.00 *2022 - Sep 2026*

Undergraduate thesis: Comparison of MediaPipe BlazePose and YOLOv8-Pose for video-based bicep curl movement analysis.

PROJECTS AND EXPERIENCE

Telkom Indonesia | Log and Observability Engineering Intern, DIT-INF *Jun 2025 - Aug 2025*

- Parsed unstructured ITGC and Kubernetes logs with ELK Stack into structured data for operational monitoring and audit workflows.
- Built multiple Kibana dashboards and prepared log outputs for use in downstream audit automation workflows.

Undergraduate Thesis | Pose Estimation for Movement Analysis *2025 - 2026*

- Compared MediaPipe BlazePose and YOLOv8-Pose against manual ImageJ ground truth using MAE and RMSE.
- Built a Python and Pandas pipeline for elbow angles, repetition counting, range of motion, angular velocity, and time under tension; BlazePose achieved 100% repetition-count accuracy (8/8).

FitTrack | Strength Training Analytics Web App *2026*

- Developed an offline-first React and Vite application for workout logging, reusable routines, schedules, history, and reviewed Quick Import.
- Built weekly muscle-volume analytics, exercise progress charts, and estimated one-repetition maximum trends, with optional manual Supabase backup and Vercel deployment.

  Live Site

Cripto | Responsive E-commerce Web Project *2025*

- Independently designed and built a responsive website with HTML, CSS, and JavaScript, including a WhatsApp-based purchase flow.

  Live Site

SKILLS

Data Analysis: Python, Pandas, Jupyter, basic SQL, Microsoft Excel (basic formulas, charts, and dashboards)
Visualization and Monitoring: Kibana, Elasticsearch, Logstash, dashboard development, operational monitoring
Web Development: React, Vite, HTML, CSS, JavaScript, Supabase
Methods: Data cleaning, model evaluation, MAE and RMSE analysis, data interpretation

TOOLS AND TRAINING

Tools: Visual Studio Code, Git and GitHub, Google Colab, Jupyter, ELK Stack, Microsoft Excel
Training: Azure AI Fundamentals Preparation Course, Mereka Academy, May 2025
